

Amendments to the Specification:

Applicant believes no new matter has been added in the amendment the following amendments to the specification.

After paragraph [29] of US 20040072619, which is a publication of the current US application no.10/647,664, please add the following paragraph:

FIG. 9 is a block diagram depicting a gaming system comprising two gaming machines where a game outcome generated on a first gaming machine is displayed simultaneously on a second gaming machine for one embodiment of the present invention.

After paragraph [78] of US 20040072619 please add the following paragraph:

FIG. 9 is a block diagram depicting a gaming system 850 comprising two gaming machines, 851 and 852, where a game outcome generated on a first gaming machine 851 is displayed simultaneously on a second gaming machine 852 for one embodiment of the present invention. Gaming machine 851 comprises a display 855 and the player input panel 818. Gaming machine 852 comprises a display 856 and the player input panel 820. In this embodiment, a game outcome 809 is initiated using player input panel 818 and then generated using a random number generator residing on gaming machine 851. A game outcome 802 is initiated using player input panel 820 and then generated using a random number generator residing on gaming machine 852. Via the communication link 857, game outcome information is directly communicated between the gaming machines 851 and 852. The game outcome information directly communicated between the gaming machines allows the game outcome 809 generated and displayed on the gaming machine 851 to be simultaneously displayed on the gaming machine 852 and the game outcome 802 generated and displayed on the gaming machine 852 to be simultaneously displayed on the gaming machine 851. In this embodiment, the game outcome presentations for game outcomes 809 and 802 are combined in a single game outcome presentation shown on both displays 855 and 856.
